

Methylene Blue

BATH SACHETS

Today's Science-Based Miracle Bath for defying the signs of aging skin

AQUA MIRACULORUM can be used as often as you like, but we recommend a minimum of once or twice per week for best results. Most people will experience positive effects shortly after the first use, but overall skin improvement is a cumulative effect. The more often you use Aqua Miraculorum, the more benefits you will see.

How to Use

With dry hands, remove one bath sachet from the inner packaging. DO NOT open the paper sachet as the powder inside can stain almost anything blue.

Drop one paper sachet into the bathwater. It will completely dissolve. For best results bathe for at least 15-20 minutes, but spend as long as you like.

Each sachet is formulated for a standard tub bath, (250 litres, 66 US gallons, 55 Imperial gallons). Aqua Miraculorum is formulated to be effective throughout a range of dilutions so it is not necessary to be precise when filling the tub.

Aqua Miraculorum is intended for external use only. Do not use more than one sachet at a time, per bath. Adding more than one sachet will not improve the results and can actually create an opposite or diminishing result.

Skin irritation tests indicate that Methylene Blue is safe for long-term use and does not cause skin irritation even at high concentrations.

Staining Cautions

We want you to have the best experience, so please read all of these instructions to reduce the possibility of staining. DO NOT open the paper sachet as the dry powder inside can stain almost anything blue.

HAIR

We recommend using caution if you have light coloured or colour treated hair. Tie up your hair and do not fully immerse in the bath. If you do encounter any light blue hair colouration wash immediately with soap or shampoo.

SKIN

Although pure Methylene Blue itself is highly staining, Aqua Miraculorum, once dissolved in the bath, is formulated to offer the greatest benefit with little to no risk of staining your skin. If you do somehow get some blue on your skin or cuticles, wash with soap and water, or bleach and water, if necessary.

FABRIC

Try to avoid using white or light coloured towels, washcloths, robes or bathmats. The blue stain is extremely difficult to remove from textiles.

BATHTUB

Most users report no issue with blue staining, however particularly white tubs with scratches, uneven or pitted surfaces can absorb some blue colour more easily. Avoid this by draining the tub immediately after your bath to limit exposure time. Any minor staining that may occur will wash off with ordinary cleaning or a simple bleach and water solution, if necessary.

We have included 3 single use bathtub liners with adhesive strips for those who have concerns about bathtub staining. Why only 3 in a package of 10 baths? The reason is that while we want the liners to be available to those who want them, most users do not and those extra liners end up in a landfill. We will promptly ship more directly to you upon request at no charge.

Simply email: support@bloopharmaceutica.com. See our website for the instructional YouTube video on how to most easily apply a bathtub liner.

CAUTION: FOR EXTERNAL USE ONLY Stop use and consult a health care practitioner if you experience any skin discomfort, irritation, or redness. Keep out of reach of children.
